

DBE/SBE Spotlight JKS Industries, LLC

JKS Industries, LLC, is a Colorado-based company specializing in environmental remediation and demolition. The JKS management team has more than 40 years of experience in the industry. JKS designs, manages, supervises, and self-performs all projects with its own management, supervisory and labor staff. Through development and implementation of their custom work plans and procedures, JKS is able to conduct site work in compliance with all regulatory requirements specific to a project. JKS offers clients a multitude of services including: self-performed asbestos abatement, lead-based paint abatement, mold remediation, soil remediation, select interior demolition and structural demolition.

JKS is currently engaged in Denver Transit Partners' Mentor Protégé Program, as the protégé to Gilmore Construction. "Through the Mentor Protégé Program, JKS now has the ability to build capacity as well as progress toward growing a sustainable business with the opportunities to bid on competitive solicitations," states Jeffrey Knight, owner of JKS.

For RTD's Eagle P3 Project, JKS has completed six asbestos abatement and demolition service projects on schedule, within budget and in accordance with the safety and documentation requirements of the DTP/ RTD Eagle P3 FasTracks Project.

"As a DBE/SBE business owner, I benefit from being part of a team that provides mentorship and guidance throughout the project, as well as bi-weekly meetings with our mentor, Gilmore Construction," says Knight. The bi-weekly meetings focus on JKS business development goals that were set before acceptance into the Mentor/Protégé Program. Both

the mentor and protégé attend progress meetings where the JKS/Gilmore teams meet with the DTP DBE/SBE team to discuss and track the progress and milestones of the program. "Because of the relationships built as a result of the program, I am forging partnerships in the community that will strengthen JKS for the future," states Knight. "The JKS team is privileged to be a part of the RTD FasTracks transit expansion that is building a better Colorado."

When asked why they are the company to trust for environmental abatement and demolition services, Knight responded, "JKS is dedicated to providing our services safely and with the highest level of quality and reliability. Our core values are safety, integrity, quality and trust, and they are front and center every day with every project. Our mission is to safely perform the most cost-effective remediation and demolition services at the highest level of quality and in a timely manner."
